

How to be a Pirate

A (barebones)
guide

Websites

Just about anything: 1337x.to

Rutracker.net (in Russian but reliable)

Anime related media: nyaa.si

Written media: annas-archive.li/

Supplies

VPN (like AirVPN)

Torrent client (like qBittorrent)

Adblocker (like uBlock Origin)

VLC Media Player

1+ TB hard drive

Steps

1 Connect to VPN, then open torrent client (ALWAYS in this order)

2 Download torrent from the web and open with your torrent client

3 Choose what files to download from the torrent and where the file goes. Don't worry about any other settings.

4 Start downloading! When it's 100% downloaded, the torrent will start seeding

5 Keep seeding the torrent until the Share Ratio (which you can check on your torrent client) is at least 1.00 (so others can torrent too)
Only seed or download torrents when connected to your VPN! Pause them otherwise
